Q:

Carousel turns by pushing initialize button
When STX220 is not control by outside device, the carousel turns to
CW for 1 step by pushing initialize button for 1 time. If the initialize button
is kept pushed, the carousel keeps turning "1 step turn => 2 step turn =>
3 step turn => ...... ". What is this movement/function for ?

A:

When the unit is initialized you may look at the content of the carousel without opening the glass door by pressing the knob. When you press the knob for longer time it will make the carrousel to rotated 1/3 revolution.
